

Chemical Hazards in the Arts

Date: March 9, 2010

Time: 6:30 to 8:30 PM

Are you protecting yourself while creating your art?

Creating your art can expose you, your family and others to toxic compounds. Art chemicals can contain toxic heavy metals, flammable solvents, toxic and corrosive acids and irritants. Fixatives and adhesives can contain carcinogens. Clean up and disposal can pollute air, water or soil. Learn more about art hazards and safer practices.
